BASIC PROJECT DATA			
<b>Full project title:</b>	<b>Network of Danube Waterway Administrations</b>		
<b>Short project title:</b> (acronym)	NEWADA	<b>Project logo:</b>

<b>Need and added value for Danube Region Strategy:</b>	<p>As the Danube, the world's most international waterway, has ten riparian states and as the development as well as the maintenance of the waterway is the responsibility of national waterway authorities, a coordinated and consistent approach to these tasks is crucial in order to create transnational benefits for all users of this international waterway. The added value of the project activities is as follows:</p> <ul style="list-style-type: none"> <li>• National strategy plans for waterway maintenance, hydrology and hydrography are prepared, as basis for pilots, implementation guidelines and further bi- or multilateral projects.</li> <li>• A web portal containing relevant fairway-related data is established as a "one-stop shop" and according to European standards.</li> <li>• The elaboration of an organisational strategy for each country fosters cooperation between the waterway authorities, development agencies and ministries within each country.</li> <li>• The "Board of Directors" containing the directors of each waterway administration was implemented in the run of the project and exists also after the lifetime of the project. Within this board strategic issues are discussed and common approaches agreed on.</li> </ul>		
<b>Objective(s) of project:</b>	The NEWADA project aimed at increasing the efficiency of the Danube as European Transport Corridor VII by intensifying cooperation between waterway administrations which helps to promote inland navigation as a cost-effective and environmentally friendly mode of transport.		
<b>Project activities:</b>	<ul style="list-style-type: none"> <li>• Intensify cooperation on hydrological and hydrographical tasks in order to achieve a higher impact. In this field the efficiency of daily work had to be increased through the exchange of know-how among experts as well as through the identification of best practise cases.</li> <li>• Improve physical accessibility of the waterway infrastructure. National action plans, feasibility studies, bilateral projects and implementation guidelines for improving waterway maintenance and river engineering have been worked out in cooperation with other Danube countries.</li> <li>• Enhance access to ICT (Information and Communication Technology) networks and services in order to overcome shortcomings. Provide up-to-date waterway related data to waterway administrations of neighbouring countries, third parties and users.</li> <li>• Integrate responsible stakeholders and foster cooperation. Enhance the communication between waterway administrations, development agencies and Ministries of Transport. Transform waterway administrations into service-oriented organisations in order to meet user demands.</li> </ul>		
<b>Transboundary impact:</b>	The project covered 8 out of 10 Danube riparian states, i.e. Austria, Slovakia, Hungary, Croatia, Serbia, Bulgaria, Romania and Ukraine
